About esense slings

Quality made by SlingCare

Esense offers a wide range of slings, designed and produced by SlingCare, under the high quality “esense by SlingCare” brand. The slings are designed for optimal comfort and safety for the caretaker and ease-of-use of the caregiver. The esense slings are provided with unique features like the patented Visual Clip and the line of Seamless slings.

The innovative materials ensure maximum support and comfort during the patients’ transfer. The durable information label is fully sewn instead of printed, making it suitable for washing. Therefore, it remains readable even after washing it over a 1.000 times.

The slings can be fitted with the unique Visual Clip or with common loops for the highest safety and maximum compatibility. There is a wide choice of types and options for active or passive patient lifts and the slings are available from size XXS to XXL.

Seamless slings

The Seamless sling is the new generation sling which is supple and stretchable; developed to provide maximal safety and comfort for the patient. The patented fabrics regulate temperature, ensure that surface tension is easily released and that forces are evenly distributed over the sling’s surface. The Seamless sling has a clever one-piece design, which eliminates all unnecessary seams (no seams in sitting area). It also ensures that surface tension can be properly eliminated. The Seamless sling is the perfect fit when it comes to the prevention of decubitus.

The Seamless Easy is designed with an opening at the back to ensure optimal distribution of the forces on the sling. This sling is designed to enable safe use without support ribs (provided that the caretaker possesses sufficient head stability).

Available types and options

The slings are available in various groups: group A contains slings for active lifts and group B-G contains different types of passive slings.

Within these groups slings are available with common loops or Visual Clip. In group B-D slings are also available in a netted version, particularly suited for use in wet spaces.

GROUP	TYPE	USE	FABRIC	CONNECTION
A	Active slings	Back Support Corset		
B	Passive slings	Standard	Standard or Mesh	Visual Clip or Loops
C		AllDay		
D		Seamless		
E		Amputation		
F		Toilet		
G		Disposable		

Please contact us for more information on custom slings or slings for special applications.
Pricelist can be requested at sales@indes.eu.

Available sizes

All slings are available in a wide range of sizes. The size can be recognized by the coloured hem:

Size	XXS	XS	S	M	L*	LL**	XL	XXL
Hem colour								

* Most sold size / ** Extra length size

Inspection and maintenance

In accordance with NEN-EN ISO 10535 the slings need to be inspected by an authorised person at least twice a year. For safety reasons, the dealer is obligated to register the serial number(s) of the sling(s) and the end customer. All findings need to be reported and documented. For slings used or cleaned above average, more frequent inspection is advised. Due to safety, it is forbidden to sew/make alterations to the slings.

- | | | |
|--|---|--|
| ✓ Maximal weight for the clips: 200 kg | ✓ Do not tumble dry: wash at 60°C and air dry (overnight) | ✓ Information label remains readable after washing over 100x |
|--|---|--|

Visual Clip

A secure connection between the sling and the patient lift is crucial to ensure safe lifting.

The Visual Clip is the answer. It is provided with small surfaces that change colour when the sling is (dis)connected. When the connection is secure, the surface changes from red to green. The green colour is identifiable and clearly visible for both caregiver and patient.

The clip is designed in such a way that it can only be attached in one way, ensuring a safe and secure connection at all times. The Visual Clip is universal and also suited for use in combination with other patient lift brands that comply with NEN-10535. A declaration of conformity can be provided by SlingCare on request.

| ✓ Patented safety clip | ✓ Audible and visual feedback |
| ✓ Universal design | ✓ Fits from one side only |

Red Dot winner

The innovative design of the Visual Clip did not go unnoticed and was awarded a Red Dot Design Award in 2014. This is an international award that has been awarded annually since 1955 by the Design Zentrum Nordrhein Westfalen.

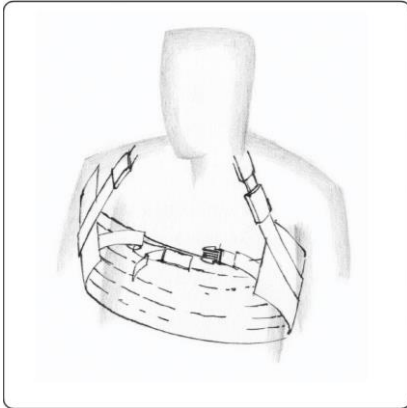

reddot award 2014
winner

Every year about 11.000 submissions are assessed by an international jury and judged on criteria like innovation, functionality and quality.

Statement by the jury

'Visual Clip impresses with an intelligent fastening mechanism that effectively supports its use. The calm colour scheme conveys a sense of security.'

Group A | Active slings | Back Support slings

Back Support slings are designed for active patient lifts and short transfers.

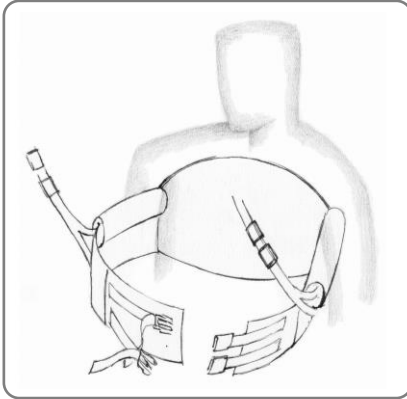

This sling is fitted with memory foam for maximum support and comfort. It is a one-size-fits-all design, made of strong polyester and covered with fleece.

The Back Support Sling comes with an abdominal fixation and double Visual Clips, which provides extra flexibility for sizing.

Order information

Group	Type	esense article #	Description
A	Active slings	55-00013	Back Support Sling with clips, universal
A	Active slings	55-00018	Back Support Sling with loops, universal

Group A | Active slings | Corset slings

Compared to the Back Support sling, Corset slings are suited for people with limited body strength and core stability.

This polyester-based sling has an elastic bottom for more grip and is provided with armpit padding for additional comfort.

The Corset sling comes with abdominal fixation and double Visual Clips, which provides extra flexibility for sizing.

Group B | Passive slings | Standard slings

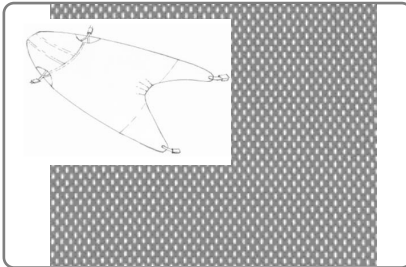

Standard slings are meant for short term use and ought to be removed once the transfer is complete.

The regular version of this sling is made of black polyester with a closed structure, making the sling easy to apply. The AllDay version is made of a more breathable fabric.

The slings are provided with padding at both the legs and shoulders. The stiffeners are placed slightly outwards for extra head support.

The **Standard sling** is intended for dry transfers.

The **Standard mesh sling** is made of black polyester with an open structure and is therefore particularly suited for use in wet spaces.

Group C | Passive slings | AllDay slings

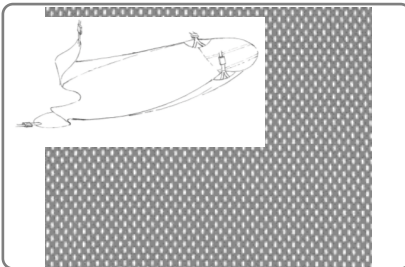

AllDay slings can be used for the patient throughout the day, without getting uncomfortable. In contrast to the Standard sling that is applied to the tail bone, the AllDay sling runs all the way under the sitting area.

AllDay slings are made of fabric with a blend of fibres that has the properties of a DryFit: the fabric is breathable, helps moisture to evaporate quickly and regulates temperature where necessary. The fabric also has stretch properties.

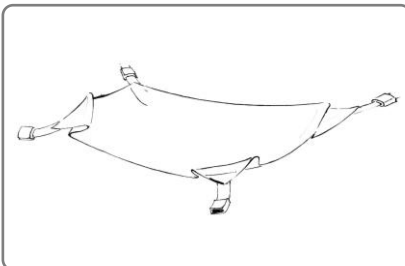

The slings are provided with padding at both the legs and shoulders. The stiffeners are placed slightly outwards for extra head support.

The standard **AllDay sling** for dry transfers.

The **AllDay mesh sling** is made of black polyester with an open structure and is therefore particularly suited for use in wet spaces.

The **AllDay Uni sling** is very flexible and molds perfectly to the body. This sling is particularly suited for orthoses. When used in combination with a 4-point hanger bar an extension bar is required.

Group D | Passive slings | Seamless slings

Seamless is a new generation sling designed for use throughout the day. Its one-piece design makes it the perfect sling when it comes to the prevention of decubitus.

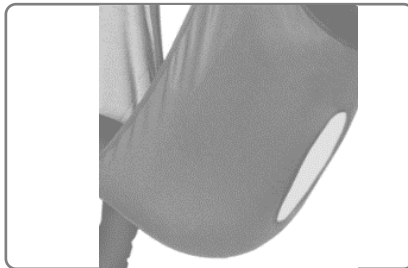

Seamless slings are made completely from one sheet of fabric, eliminating all unnecessary seams (no stitched seams in the sitting area). The stretchable fabric regulates temperature, ensures that surface tension is easily released and forces are more evenly distributed over the sling.

The standard **Seamless sling** is intended for dry transfers.

The **Seamless mesh sling** is made of fabric with an open structure and is therefore particularly suited for use in wet spaces.

The **Seamless Easy sling** is designed with an opening at the back, to ensure even more optimal distribution of forces on the sling. Easy slings are not fitted with head rest.

Group E | Passive slings | Amputation slings

Seamless Amputation sling has all benefits of the Seamless line but is specially designed for patients with a leg amputation.

Seamless Amputation slings provide extra comfort for patients with a leg amputation. The sling has limited space in the leg area to prevent the patient from sliding away.

If less space is required in the leg area due to the amputation type, this sling can be customized on request.

Group F | Passive slings | Toilet sling

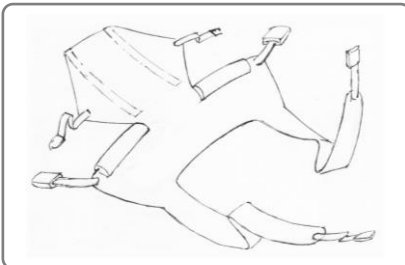

Toilet slings are specifically designed for transfers to the bathroom and ought to be removed once the transfer is complete.

Note: patients need sufficient shoulder functionality!

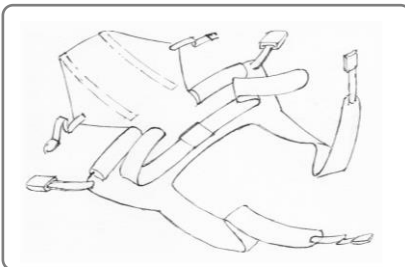

This sling is made of black polyester. The sling is easy to apply and is provided with an open seating area. It is fully lined and fitted with additional armpit padding for extra comfort.

The most common version is the **Toilet sling with Abdominal Fixation**.

The **Toilet sling with Head Support** is equipped with a head rest with stiffeners that are placed slightly outwards (only advised for patients with sufficient core stability).

The **Toilet sling with Head Support and Abdominal Fixation** is equipped with both.
